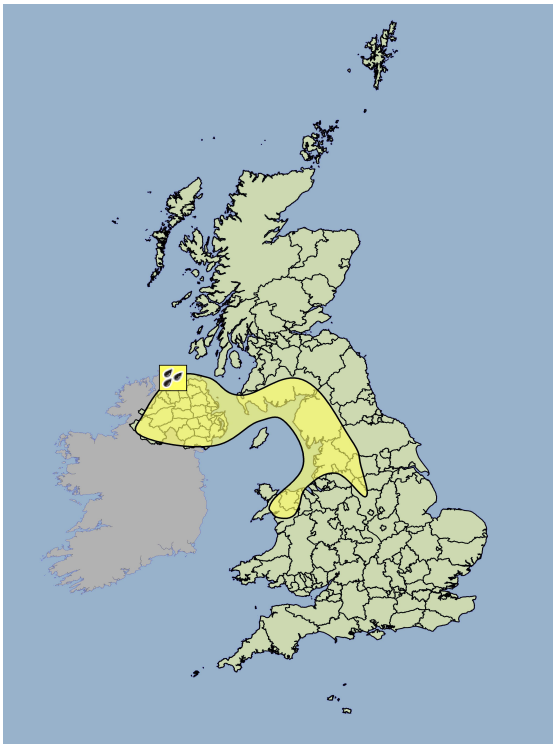
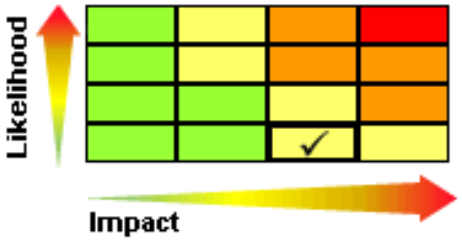
National Severe Weather Warning Service





Chief Forecasters Assessment
Further frontal systems running quickly in from the west, containing very moist tropical air at times, are likely to lead to further bouts of persistent, and at times, heavy rain. Totals of 30-50 mm are possible, with a risk of in excess of 70 mm on exposed western facing hills.

There are large uncertainties over both the northern extent, as well as the timings of the most intense rain, nevertheless some significant impacts are possible.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **12:00 on Mon, 16th Nov 2015** until **23:59 on Tue, 17th Nov 2015**

Successive frontal systems moving quickly west to east will bring some persistent and locally heavy rainfall for a time across the hills of Northern Ireland, south-west Scotland, north-west England and north-west Wales.

Be aware of the potential for localised flooding, both from standing water and rivers overtopping their banks, particularly given the saturated ground resulting from heavy rainfall over the weekend.
